

Installation and Maintenance Instruction for Low Temperature Painted Glass

Glass tile may be susceptible to scratching in handling and installation, as well as use.

Expect variation of color from production run to production run.

Installation

Only use adhesives with high adhesion and elasticity which are especially recommended for installing glass. Make sure to get complete coverage. All substrates should be properly reinforced to be sure there is no movement. For mortar installations, the mortar bed has to be cured (less than 2% humidity) and has to have proper reinforcing.

Please refer to the TCNA HANDBOOK for more specific information regarding installation of glass tile.

Adhesives & Grouting

Any type of cement based adhesive & grout is suitable

Maintenance: Use a non-abrasive cloth and neutral detergents for cleaning. Avoid acid detergents, chemicals and solvents.

Usage

It is recommended for interior use. It can be used on shower walls but must be grouted with water resistant (modified with latex) or epoxy grout. Do not use in areas submerged in water
